How do prices influence our choices ?

## Let's compare ...

The pink t-shirt is cheaper **er than** the blue t-shirt. You prefer the blue one but it's **too** expensive !

The yellow t-shirt is **the most** expensive but it makes the blue t-shirt **more** reasonable. So, you think " £80 is not **too** bad."

## The decoy effect

The decoy effect is often used in subscriptions. It encourages you to buy more.

In this experiment there were three options : digital version (\$59), print version (\$125) which was the decoy option and the combo version where customers got both digital and print versions for (\$150). There were 2 cases.

In the first case with 2 options : the print-only and the digital version. 68% of customers bought the digital version, and 32% bought print only version.

In the 2nd case with 3 options : 84% of customers purchased the combo version generating a total revenue of \$ 12 600. The customers preferred subscribing the combo version because they believed it was a good bargain.
